

Mineral Salts

Mineral salts are essential substances for the body, participating in many vital processes. They maintain the proper structure of bones and teeth, promote the transmission of nerve impulses, maintain stable pH levels in the blood, intervene in the regulation of blood pressure and the amount of fluid in the body and contribute to normal muscle function.

Mineral salts are eliminated through diuresis and sweating, especially in summer, due to increased sweating, a phenomenon that can cause various disorders and be an indication of metabolic imbalances.

Check your mineral salts with the CDC|Gruppo Affidea Check-up

With no letter from your doctor.

- **CHLORIDE**
- **SODIUM**
- **POTASSIUM**
- **MAGNESIUM**
- **PHOSPHOR**
- **CALCIUM**
- **IRON**
